

Financial Report

1. Dashboard Objective & Logic

The primary objective of this dashboard is to provide a dynamic, at-a-glance view of the company's financial health. It consolidates key performance indicators (KPIs) and trends into an interactive one-page view, enabling swift analysis and data-driven decision-making. The core logic is based on the following calculations:

KPI Calculations:

- **Revenue:** A direct sum of revenue from the source data for the selected period.
- **Gross Margin %:** Calculated as $(\text{Total Revenue} - \text{Total COGS}) / \text{Total Revenue}$. This metric measures the profitability of core business operations before overheads.
- **EBITDA %:** Calculated as $(\text{Gross Profit} - \text{Opex} + \text{Depreciation/Amortization}) / \text{Total Revenue}$. It represents the company's overall operational profitability and cash-generating ability.
- **Net Cash:** A simple calculation of $\text{Total Cash Inflow} - \text{Total Cash Outflow}$, indicating the net cash movement for the period.
- **Budget vs. Actual Logic:**
 - **Budget Variance %:** Calculated as $(\text{Actual Revenue} - \text{Budget Revenue}) / \text{Budget Revenue}$. This instantly shows performance relative to the financial plan.
- **Time Intelligence:**
 - Month-over-month growth metrics are calculated by comparing the total of the selected period against the total of the immediate preceding period. This logic applies to all trend indicators on the KPI cards.

2. Key Insights & Actionable Information

This dashboard is designed not just to report data, but to drive action. Users can uncover the following insights:

- **Identify Profitability Trends:**
 - **Insight:** The *Revenue & Profit Trend* chart shows if profit margins are keeping pace with revenue growth. A month with high revenue but low gross margin may indicate issues with pricing or cost of goods.

- **Monitor Budget Adherence Instantly:**
 - **Insight:** The *Budget vs. Actual Variance %* chart immediately pinpoints which months fell short of the financial plan.
- **Assess Product & Service Performance:**
 - **Insight:** The *Product/Service Performance* bar chart clearly identifies top-revenue drivers ("cash cows") and underperforming offerings.
- **Manage Credit Risk & Cash Flow:**
 - **Insight:** The *Receivables Aging* chart visualizes how much cash is tied up in overdue invoices, highlighting potential credit risks, especially in the "90+ Days" buckets.
- **Explore Data with Interactive Drill-Downs:**
 - **Insight:** The dashboard is fully interactive. For example, by **clicking a month** in the main trend chart, all other visuals on the page will filter to show data *only for that month*.

3. Assumptions & Limitations

To ensure clarity and proper use, the following assumptions were made during the dashboard's creation:

- **Data Integrity:** The accuracy of the insights is directly dependent on the accuracy, completeness, and timeliness of the underlying source data. Blanks in numerical fields are treated as zero in calculations.
- **Standard Definitions:** Financial metrics such as COGS, Opex, and EBITDA are calculated based on the definitions provided. Any change in these definitions will require an update to the DAX measures.
- **Monthly Granularity:** The dashboard is designed for monthly-level analysis as requested. The underlying data is assumed to be aggregated at a monthly level.
- **Static Budget:** It is assumed that the Revenue Budget values are fixed for their respective periods and do not change.
- **Scope:** This dashboard focuses on key P&L, cash flow, and receivables metrics. It does not include a full balance sheet or detailed expense breakdown unless specified.
